

FULL STACK DEVELOPMENT PROJECT REPORT

COLLEGE NAME: Shah and Anchor Kutchhi Engineering College

Department of Computer Science Engineering

Academic Year: 2025-2026

Student Details

Student Name: RIYA BHAVESH JOSHI , Shlok Kakade, Shreehari Katkar

Roll Number: 26, 27, 30

Class/Semester: TY04 | Sem 6

Faculty Name: Saritha.K

1. Problem Statement

Farmers often do not receive fair prices for their produce because they depend on middlemen, have limited direct access to consumers, and lack simple digital tools to market their goods. At the same time, consumers struggle to find fresh produce at reasonable prices directly from local farmers. This creates price inefficiency, food wastage, low farmer income, and weak market transparency. AgroConnect aims to solve this problem by providing a platform that connects farmers and consumers directly, making produce trading simpler, fairer, and more accessible.

2. SDG Goal Mapping

1. SDG 1: No Poverty

AgroConnect helps farmers increase their income by enabling direct sales and reducing dependence on middlemen.

2. SDG 2: Zero Hunger

The platform improves access to fresh agricultural produce and supports a more efficient food distribution system.

3. SDG 8: Decent Work and Economic Growth

It promotes rural entrepreneurship and supports sustainable income opportunities for farmers and small agricultural sellers.

4. SDG 10: Reduced Inequalities

By giving small-scale farmers a digital marketplace, the project helps reduce the gap between producers and larger market players.

5. SDG 12: Responsible Consumption and Production

Direct local selling can reduce waste, improve supply efficiency, and encourage better consumption practices.

3. Objectives

AgroConnect is designed to create a direct farmer-to-consumer marketplace where farmers can list their produce, consumers can browse and buy fresh goods, and administrators can manage the platform efficiently. The goal is to improve farmer earnings, reduce unnecessary intermediaries, and provide affordable fresh produce to consumers.

4. Software Requirements

The development and execution of the AgroConnect system require a suitable software environment consisting of programming tools, frameworks, libraries, database technologies, and supporting services. These requirements ensure that the application can be developed, tested, and deployed efficiently.

1. Operating System

The system may be developed on any standard operating system such as Microsoft Windows, Linux, or macOS. A stable operating system environment is necessary for running the development tools, web server, and supporting services.

2. Development Environment

A modern source-code editor or integrated development environment is required for

writing, modifying, and managing the application code. Visual Studio Code is recommended due to its extensive support for web development technologies and extensions.

3. Frontend Technologies

The user interface of AgroConnect is built using standard web technologies such as HTML5, CSS3, and JavaScript. For advanced interface development, the project uses React.js and Next.js to create responsive, component-based, and scalable web pages.

4. Backend Technologies

The backend functionality is supported through server-side logic implemented using Next.js API routes. These API routes facilitate data processing, authentication handling, and communication between the frontend and the database layer.

5. Database Management System

MongoDB is used as the primary database management system for storing user details, produce listings, and other application-related records. Mongoose is employed as an Object Data Modeling library to simplify interaction between the application and the MongoDB database.

6. Authentication and Verification Services

Firebase Authentication is utilized for phone number verification and user authentication support. This service enhances the security and reliability of user verification within the system.

7. Notification Services

To support communication between users, the system makes use of external notification services. Nodemailer is used for sending email alerts, while an SMS-based service may be integrated for mobile message notifications.

8. Browser Requirements

The system requires a modern web browser such as Google Chrome, Microsoft Edge, or Mozilla Firefox for execution and testing. These browsers provide support for the latest web standards required by the application.

9. Dependency and Package Management

Node.js and npm are required for managing dependencies, installing external packages, and running the development server. These tools are essential for maintaining the project environment and handling third-party libraries.

10. Version Control

Git is recommended for source code management and version control. It assists in tracking changes, collaboration, and maintaining different versions of the project during development.

11. Optional Deployment Environment

For deployment, the application may be hosted on platforms such as Vercel, while MongoDB Atlas may be used as a cloud-based database service. These platforms improve accessibility, scalability, and maintenance of the system.

5. Source Code

7. Conclusion

AgroConnect addresses a critical gap in the agricultural supply chain by enabling direct interaction between farmers and consumers. By reducing dependency on middlemen and introducing a simple, technology-driven marketplace, the platform helps ensure fair pricing for farmers and affordable, fresh produce for consumers. This not only improves farmer income and market transparency but also contributes to reducing food wastage and strengthening local food systems.

Aligned with key Sustainable Development Goals such as No Poverty, Zero Hunger, and Reduced Inequalities, AgroConnect promotes inclusive economic growth and supports rural empowerment through digital transformation. With its scalable architecture using modern web technologies, secure authentication, and efficient database management, the system is well-suited for real-world deployment and future enhancements.

Overall, AgroConnect serves as a practical and impactful solution that bridges the gap between agriculture and technology, fostering a more efficient, fair, and sustainable marketplace ecosystem.
